VIKAS CHOUHAN

QA Engineer | Mobile · Web · API Testing

Panvel, Navi Mumbai | 9082053547 | vikas06cs@gmail.com | LinkedIn | GitHub

SUMMARY

QA engineer who tests the full user journey, not just single screens. I work on money flows (wallet coins, refunds, collections), complex signups and bookings, where one wrong rule or unclear message costs users' trust. In 6 months at a healthtech startup, first as an intern and now full time, I found **700+ bugs** across frontend and backend, including critical ones. I check that every status and on-screen message is correct and easy to understand, and I automate the checks that must be repeated every release.

EXPERIENCE

HummCare (Humm Info Care Pvt. Ltd.) Mumbai · Healthtech startup

QA Engineer (Full-time) · Apr 2026 – Present

QA Intern · Sep 2025 – Mar 2026

- **Wallet coins (5+ features):** Tested how coins are earned, used, tracked in the balance and expired, under many different conditions and rules. Documented each flow from the user's point of view and logged every issue as a bug report. Found **120+ bugs** across frontend and backend, including critical ones.
- **Refund and collection (4+ features):** Tested the full flow and its logic across different statuses (pending, success, failed, partial), and checked that each status behaves correctly. Reviewed every UI message so users can easily understand what happened and what to do next.
- **Complex signup:** Tested 8+ different signup types, where each user gets a different plan package. Checked that every user received the correct package and access.
- **Booking flow:** Tested the full booking journey: slot selection, payment, family members, reschedule and cancel, on Android, iOS and web.
- **Test automation:** Automated the flows that need re-checking every release, such as booking, using the standard Page Object Model (POM) framework. Tests run on BrowserStack and are scheduled with GitHub Actions every week at night.
- **UI checks and documentation:** Quick UI checks across the app each release (layout, wording, consistency). Wrote test cases (functional, regression, smoke, sanity, edge) and bug reports with steps, severity and video evidence.
- **Performance and security:** Ran load, stress and spike tests in JMeter to find bottlenecks before release. Ran MobSF static scans on Android builds against the OWASP Mobile Top 10.

SKILLS

Testing types	Functional, regression, smoke, sanity, exploratory, end-to-end, UAT
Automation	Page Object Model (POM) framework, BrowserStack, GitHub Actions (weekly scheduled runs)
API and performance	Postman, REST API testing, Apache JMeter
Security	MobSF, OWASP Mobile Top 10
Platforms	Android, iOS, web, cross-browser
Tools	Git, GitHub, Agile/Scrum, bug lifecycle and test reporting
Languages and data	SQL, MySQL, Firebase, Core Java (basic)

CERTIFICATIONS AND EDUCATION

- Appium Mobile Automation · Postman and REST API Testing · Apache JMeter · GitHub Actions CI/CD, Git and GitHub
- ISTQB Foundation Level (in progress)
- **B.Sc. Computer Science**, 2022 – 2025 · Pillai College of Arts, Commerce and Science, Panvel
