PROFESSIONAL SUMMARY

QA Engineer with 1+ year of experience at a healthtech startup, promoted from QA Intern to full-time QA Engineer. Tests complete user journeys across Android, iOS, web and APIs, with a focus on money flows (wallet coins, refunds, collections), multi-plan signups and bookings. Found 700+ bugs across frontend and backend, including critical issues. Builds automated regression tests using the Page Object Model, run on BrowserStack through GitHub Actions, and uses AI tools to speed up test design and debugging.

WORK EXPERIENCE

QA Engineer (Full-time), HummCare (Humm Info Care Pvt. Ltd.), Mumbai

Apr 2026 – Present | QA Intern: Sep 2025 – Mar 2026

- **Wallet coins (5+ features):** Tested how coins are earned, redeemed, tracked in the balance and expired under many rules and conditions, including boundary and expiry edge cases. Documented each flow from the user's point of view and found 120+ bugs across frontend and backend, including critical ones.
- **Refunds and collections (4+ features):** Tested the full flow and logic across every status (pending, success, failed, partial). Reviewed every UI message so users clearly understand what happened and what to do next.
- **Backend validation:** Verified wallet balances, refunds, coin expiry and user plans in the Django admin panel and internal dashboards, and tested REST APIs in Postman, catching mismatches between what the app showed and what the backend stored.
- **Complex signup:** Tested 8+ signup types, each mapped to a different plan package, and confirmed every user received the correct package and access.
- **Booking flow:** Tested the end-to-end journey (slot selection, payment, family members, reschedule, cancel) on Android, iOS and web.
- **Test automation and CI/CD:** Built a Page Object Model (POM) automation suite in Java for flows re-checked every release, such as booking. Tests run on BrowserStack real devices and browsers through a GitHub Actions pipeline, with weekly scheduled night runs plus on-demand triggers, and reports, screenshots and videos saved for every run.
- **AI-assisted testing:** Used AI tools to draft test cases and edge cases from user stories (e.g. coin expiry and partial refund rules), generate test data, and debug flaky locators in automation scripts. Reviewed every output before use, which shortened test design time.
- **Performance and security testing:** Ran load, stress and spike tests in Apache JMeter to find bottlenecks before release. Ran MobSF static scans on Android builds against the OWASP Mobile Top 10.
- **Test documentation and bug tracking:** Wrote functional, regression, smoke, sanity and edge test cases in Excel, and bug reports with steps, severity and video evidence, tracked in Jira, ClickUp and OpenProject. Ran release UI checks for layout, wording and consistency.

TECHNICAL SKILLS

Testing: Functional, Regression, Smoke, Sanity, Exploratory, End-to-End, UAT, Edge-case Testing

Automation and CI/CD: Java, Selenium, Playwright, Appium, Page Object Model (POM), BrowserStack, GitHub Actions

API, Performance and Security: Postman, REST API Testing, Apache JMeter (load, stress, spike), MobSF, OWASP Mobile Top 10

Backend and Data: Django Admin, Internal Dashboards, SQL, MySQL, Firebase

AI and LLM Testing: DeepEval, RAG evaluation, AI-assisted test case design, test data generation, script debugging

Bug Tracking and Documentation: Jira, ClickUp, OpenProject, Microsoft Excel (test cases), Microsoft Word (reports), Bug Lifecycle

Platforms and Process: Android, iOS, Web, Cross-browser, Git, GitHub, Agile/Scrum

CERTIFICATIONS

- Appium Mobile Automation, Postman and REST API Testing, Apache JMeter, GitHub Actions CI/CD with Git and GitHub
- ISTQB Certified Tester Foundation Level (CTFL), in progress

EDUCATION

B.Sc. Computer Science, Pillai College of Arts, Commerce and Science, Panvel | 2022 – 2025
